Seeking career opportunities in Navia Life Care

Navia Life Care <info@navialifecare.com>   Wed, Jul 18, 2018 at 12:18 PM
To: abdul.7275.ak@gmail.com

Hi Abdul

If you are interested in back-end, we would need you to try the following problem, and send us your response in 4 days, i.e. by 12 pm Sunday, 22nd July 2018.

Steps:

1. Create a basic CRUD application to create a login with multiple entry points. (Eg. Doctor, Nurse, Reception)
2. The type of data available to a user will vary depending on the entry point.
3. The active account info should be visible on each screen.
4. Post logging in , allow the user to upload a report, view uploaded reports as well as sharing of uploads with various accounts on the network.
5. Every time a report is uploaded and shared with a user, generate a notification for the user informing him/her about the upload.

Tech Stack :
- Python 2.7
- Django 1.11
- You're allowed to use any frontend framework of your preference.
- Git

Additional Information:
- Don't forget to comment your code clearly
- Use git to maintain your code and performing regular pushes is a compulsory.
- Extra points for a clean UI.

Happy Hacking!

Thanks
